

Feeding the world with artificial intelligence –

Intern in full time

As a young Karlsruhe startup, we help farmers to irrigate their fields with less effort, water and energy. In this way, we prevent soil leaching and reduce environmentally harmful nitrate in groundwater. At the same time, we ensure conscious and efficient use of water through yield-optimized irrigation and help farmers feed the world with limited resources. To do this, we have developed artificial intelligence that determines the optimal amount of irrigation. Furthermore, our field monitoring system understands the reality in the field: Using weather stations, satellite data and agronomic models, we determine the optimal measures for sustainable and resource-efficient water management.

Your assignments

- ✓ Market research and market hypothesis testing
- ✓ Customer development according to Lean Startup
- ✓ Prioritization of customer needs, work on pricing models and product definition

What you should bring with you

- ✓ Highest standards of customer satisfaction
- ✓ The desire to help customers in their greatest need in a sustainable way
- ✓ Degree in business or comparable practical experience
- ✓ High motivation to grow professionally and personally

What would be ideal

- ✓ Experience in agriculture, management consulting or customer projects
- ✓ Experience with agile startup concepts such as value proposition design, design thinking, Google Design Sprints, business model innovation and the like

What we offer

- ✓ An interdisciplinary, customer- and product-oriented startup with a big vision.
- ✓ Strong team culture, an experienced founding team and successful mentors
- ✓ Flexible working hours and a state-of-the-art office in the Technology Factory in Karlsruhe, Germany
- ✓ Diverse learning and a steep learning curve
- ✓ A startup funded by the EU, DLR and the European Space Agency (ESA)

Write us an email at jobs@heliopas.com and tell us about yourself and your experiences so far.

We look forward to hearing from you!
